Sequence 2518, Application US/09252991A
Patent No. 6551795
GENERAL INFORMATION:
APPLICANT: Marc J. Rubenfield et al.
APPLICANT: Marc J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS;
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 107196.136
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1 VIDIIGTSPTSWEQA---AAEAVQRARDSVDDIRVARVIEQDMAVDSAGKITYRIKLEVS 57

                                                                                     A new immunogenic polypeptide has been developed comprising an immunogenic part of a soluble Mycobacterium tuberculosis antigen (its variant differing only in conservative substitutions and/or modifications). The present sequence represents a M.tuberculosis antigen, TDRa3. The immunogenic protein, and fusion proteins containing one or more of the proteins or one of the proteins BSAT-6, are useful in vaccines, preferably when formulated with a mon-specific adjuvant, to induce an immune response against M.tuberculosis (for treatment or prevention).

                                                     (or
A new immunogenic polypeptide has been developed comprising an immunogenic part of a soluble Mycobacterium tuberculosis antigen (or modifications). The present sequence represents a M.tuberculosis antigen, passa; The immunogenic polypeptide can be used to diagnose antibodies in flection by forming complexes with specific antibodies in the sample. Fragments of DNA encoding the immunogenic polypeptide can be used as diagnostic primers or probes and agents that bind to the antigen, especially monoclonal antibodies or equivalent polyclonal antibodies, are also used for diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ..

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This polypeptide comprises Mycobacterium tuberculosis soluble antigen Tbha3. It is encoded by a DNA sequence (see AAV44553) isolated from a M. tuberculosis strain H37Ra expression library with rabbit anti-sera raised against M. tuberculosis supernatant. No significant homology was found between TbRa3 and Genebank database sequences. The invention relates to compositions and methods for diagnosing tuberculosis. It provides polypeptides (see AAW64291-W64379) comprising an antigenic portion of a soluble of tuberculosis antigen, or an immunogenic portion of an M. tuberculosis antigen, or an immunogenic mortion of an M. tuberculosis antigen, as well as DNA sequences encoding such polypeptides, recombinant expression vectors and transformed or transfected host cells. Also claimed are methods and diagnostic kits for detecting M. tuberculosis infection in a patient using the above polypeptides, antibodies or oligonucleotide probes and primers, for the diagnosis of tuberculosis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes polypeptides comprising an immunogenic are vaccines and fusion tuberculosis antigen (Ag). Also described are vaccines and fusion protein containing M. tuberculosis Ag's. DNAs encoding them, derived fusion proteins and other polypeptides fragments, can be used in pharmaceutical compositions or vaccines to generate a protective or therapeutic immune response to M. tuberculosis and as reagents in skin tests for diagnosis of tuberculosis. Ag can induce proliferation of, or cytokine secretion by T. B or natural killer cells and/or marcophages in tuberculosis-immune subjects. AZI9249 to AAZI9460 and AAY39083 to AAX39225 are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     9

The invention relates to a recombinant nucleic acid molecule encoding a fusion polypeptide. The recombinant nucleic acid comprises a heterologous polynucleotide sequence encoding an antigen or an antigenic fragment from Mycobacterium sp. and a Leishmania polynucleotide sequence encoding a polypeptide or its fragment. The Leishmania polynucleotide is selected from TSA, LeIF, MIS, and 6H polynucleotides. Sequences of the invention are used in methods for eliciting immune response in mammals. They are useful as vaccines to elicit protective immunity against pathogenic microorganisms such as Leishmania and Mycobacterium tuberculosis. Fusion polypeptides are used for enhancing the expression of polynucleotides, as in vivo diagnostic agents and for raising antibodies in a non-human animal. The invention is used in gene therapy. The present sequence is M. tuberculosis TbRa3 antigenic protein.
                                                                                                                                                                                                                                                                                                                               New recombinant nucleic acid molecule comprising a Leishmania TSA, LeIF, MIS or 6H polymucleotide, useful as vaccine to elicit protective immunity against pathogenic microorganisms e.g. Leishmania and Mycobacterium tuberculosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1 VIDIIGTSPTSWEQAAAEAVQRARDSVDDIRVARVIEQDMAVDSAGKITYRIKLEVSFKM

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          o;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           VIDIIGTSPTSWEQAAAEAVQRARDSVDDIRVARVIEQDMAVDSAGKITYRIKLEVSFKM 60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention describes novel recombinant antigens and their encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  nucleic acids derived from Mycobacterium tuberculosis. The novel polypeptides are useful for detecting M. tuberculosis infection in a biological sample by detecting antibodies which bind with the polypeptides, and are useful as vaccines for immunizing against M. tuberculosis infection. The new detection methods are needed as current vaccination strategies do not provide 100% immunity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        0; Gaps

                                                                                                                                                                                                                                                                           The present invention relates to fusion proteins containing at least two Mycobacterium species antigens, nucleotides encoding them and compositions comprising such fusion proteins. The present invention particularly relates to nucleic acids encoding fusion proteins that include two or more individual M tuberculosis antigens which increase the serological sensitivity of sera from individuals infected with tuberculosis and methods for their use in diagnosis, prevention and treatment of tuberculosis infection. Sequences of the invention and treatment of tuberculosis infection. Sequences of the invention and prevention of Mycobacterium infection. The fusion proteins and the prevention of Mycobacterium infection. The fusion proteins and the polynucleotides are useful as diagnosis, treatment and prevention of Mycobacterium, in vitro and in vivo assays for detecting humoral antibodies or cell-mediated immunity against M. tuberculosis, for the diagnosis to generate or monitoring of disease progression, as immunogens to generate or alicit a protective immune response in a patient and for raising anti-M. tuberculosis antibodies in a non-human immal. Sequences of the invention are also used as vaccines. MTB32A fusion proteins of the invention are also used as vaccines. MTB32A fusion proteins of the invention are useful as in vivo diagnostic agents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1 VIDIIGTSPISWEQAAAZAVQRARDSVDDIRVARVIEQDMAVDSAGKITYRIKLEVSFKW 60

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence represents the fusion protein TbF-2 which is composed cimmunogenic polypeptides from Mycobacterium tuberculosis (MT). This protein is used in a method for inducing protective immunity against tuberculosis (TB). This sequence can be formulated into vaccines

This polypeptide comprises a fusion protein, designated TbF-2, composed of Mycobacterium tuberculosis antigens TbRa3 (see AAW64255), 38 kDa antigen (see AAW64364), Tb38-1 (see AAW64321) and DBEP (see AAW64322). It was produced by PCR amplification (see AAW44450-57) of the appropriate antigen DNA sequences, cloning into an expression vector, and expression in E. coli. TbF-2 can be used for serodiagnosis of tuberculosis. The invention relates to compositions and methods for diagnosing tuberculosis. It provides polypeptides (see AAW64291-W64379) comprising antigens or limmunogenic portions of M. tuberculosis antigens, or fusion proteins, DNA sequences encoding such polypeptides, recombinant expression vectors and host cells. Also claimed are methods and diagnostic kits for detecting M. tuberculosis infection in a patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                         1 VIDIIGTSPISWEQAAAEAVQRARDSVDDIRVARVIEQDMAVDSAGKITYRIKLEVSFKM

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes polypeptides comprising an immunogenic part of a Mycobacterium tuberculosis antigen (Ag). Also described are vaccines and fusion protein containing M. tuberculosis Ag's.

M. tuberculosis Ag's. DNAs encoding them, derived fusion proteins and other polypebtides fragments, can be used in pharmaceutical compositions or vaccines to generate a protective or therapeutic immune response to
                                                                                                                                                                                                                                                                                                          0; Gaps
The start antigen fusion protein, termed TbF-2, composed of the antiger TbRa3, 39kD, Tb38-1 and DPBP. The fusion protein is expressed in the color carrying a polynucleotide (see AAZ20198) comprising the 4 coding sequences. The invention provides fusion proteins (see AAY32059-71) containing at least 2 M tuberculosis antigens. The new fusion proteins and polynucleotides encoding them are useful as vaccines for preventing tuberculosis (claimed), detection of anti-M. tuberculosis antibodies), monitoring of disease progression, and treatment of tuberculosis. They are more effective immunogens than mixtures of the individual protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New antigens from Mycobacterium tuberculosis useful in diagnostic skin tests and protective or therapeutic vaccines or compositions

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This invention describes novel recombinant antigens and their encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             9 VIDIIGTSPISWEQAAAEAVQRARDSVDDIRVARVIEQDMAVDSAGKITYRIKLEVSFKM
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1 VIDIIGTSPTSWEQAAAEAVQRARDSVDDIRVARVIEQDMAVDSAGKITYRIKLEVSFKM
                                                                                                1 VIDIIGTSPTSWEQAAAEAVQRARDSVDDIRVARVIEQDMAVDSAGKITYRIKLEVSFKM
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        nucleic acids derived from Mycobacterium tuberculosis. The novel polypeptides are useful for detecting M tuberculosis infection in biological sample by detecting antibodies which bind with the polypeptides, and are useful as vaccines for immunizing against M. tuberculosis infection. The new detection methods are needed as current vaccination strategies do not provide 100% immunity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Antigen; diagnosis; detection; infection; antibody; immunisation; vaccine; immunity.

Also described are vaccines and fusion protein containing M. tuberculosis Ag's.

M. tuberculosis Ag's. DNAs encoding them, derived fusion proteins and other polypeptides fragments, can be used in pharmaceutical compositions or vaccines to generate a protective or therapeutic immune response to M. tuberculosis and as reagents in skin tests for diagnosis of tuberculosis. Ag can induce proliferation of, or cytokine secretion tuberculosis-immune subjects. AAZ19245 to AAZ19460 and AAX39083 to AAX39225 are used in the exemplification of the present invention.

M. tuberculosis and as reagents in skin tests for diagnosis of tuberculosis. Ag can induce proliferation of, or cytokine secretion by, T, B or natural killer cells and/or macrophages in tuberculosis-immune subjects. AAZ1949 to AAZ19460 and AAX39083 to AAX39225 are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New antigens from Mycobacterium tuberculosis useful in diagnostic
skin tests and protective or therapeutic vaccines or compositions

```
This invention describes novel recombinant antigens and their encoding nucleic acids derived from Mycobacterium tuberculosis. The novel polypeptides are useful for detecting M. tuberculosis infection in a biological sample by detecting antibodies which bind with the polypeptides, and are useful as vaccines for immunizing against M. tuberculosis infection. The new detection methods are needed as current vaccination strategies do not provide 100% immunity.
                                                                                                                       Antigen; diagnosis; detection; infection; antibody; immunisation; vaccine; immunity.
                                                                                                                                                                                                                                                                                                                                                                                                                          New polypeptide comprising antigenic portions of M. tuberculosis

(Isopentenyl pyrophosphate isomerase).
Rickettsia prowazekii.
                                                                                                                                                                                                                                                                                                                                                                                          "Mechanisms of evolution in Rickettsia conorii and R. prowazekii.";
                                                                                                                                                                                                                                                                                                                                                                                                                        Science 293:2093-2098(2001).

-!- FUNCTION: Catalyzes the 1.3-allylic rearrangement of the homoallylic substrate isopentenyl (IPP) to its allylic isomer, dimethylallyl diphosphate (DMAPP) (By similarity).

-!- CATALYTIC ACTIVITY: Isopentenyl diphosphate = dimethylallyl
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      SEQUENCE FROM N.A.

Submitted (OCT-1999) to the EMBL/GenBank/DDBJ databases.
-! CATALYTIC ACTIVITY: 3 - (5 - oxo - 4, 5 - dihydro-3 - H-imidazol-4-
Yl)popanoate = urocanate + H(2)O.
-! COPACTOR: NAD (By similarity).
-! PATHWAY: Histidine degradation, second step.
-! SIMILARITY: BELONGS TO THE UROCANASE FAMILY.
                                                                                                       COFACTOR: FWN AND NADPH (BY SIMILARITY).
SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
SIMILARITY: Belongs to the IPP isomerase type 2 family.

"DNA sequence of a beta-glucosidase from Ruminococcus albus.";
Nucleic Acids Res. 18.671-671(1990).
-!- CATALYTIC ACTIVITY: Hydrolysis of terminal, non-reducing be glucose residues with release of beta-D-glucose.
-!- PATHWAY: Cellulose degradation.
-!- SATHWAY: Celluloss TO FAMILY 3 OF GLYCOSYL HYDROLASES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ω,

Gossen K.K., Katavic V. a cDNA from microspore derived embryos o
"Nucleotide sequence of a cDNA from microspore derived embryos o
Brassica oleracea is homologous to 40S ribosomal protein S7.",
(In) Plant Gene Register PGR99-096.
-! SIMILARITY: BELONGS TO THE S7E FAMILY OF RIBOSOMAL PROTEINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               23; Indels 12;

                                        DNA Res. 7:331-338 (2000).
-!- FUNCTION: Catalyzes the 1,3-allylic rearrangement of the homoallylic substrate isopentenyl (IPP) to its allylic isomer, dimethylallyl diphosphate (DMAPP) (By similarity).
-!- CATALYTIC ACTIVITY: Isopentenyl diphosphate = dimethylallyl
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Bacteria; Proteobacteria; Gammaproteobacteria; Enterobacteriales;

J. Bacteriol. 185:2330-2337(2003).

-!- CATALYTIC ACTIVITY: 2 ATP + L-glutamine + CO(2) + H(2)O = 2 ADP + possible to the phosphate + L-glutamate + carbamoyl phosphate.

-!- COFACTOR: Binds 3 manganese ions per subunit (By similarity).
-!- PATHWAY: Arginine biosynthesis.
-!- PATHWAY: Pyrimidine biosynthesis, first step.
-!- PATHWAY: Pyrimidine biosynthesis, the small (or glutamine) chain promotes the hydrolysis of glutamine to ammonia, which is used by the large (or ammonia) chain to synthesize carbamoyl phosphate (By
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 2 IDIIGTSPTSWEQAAAEAVQRARDSVDDIRV----ARVIEQDMAVDSAGKITYRIKLEV

A Kilstrup M., Lu C.D., Abdelal A., Neuhard J.;

Invalentide sequence of the carA gene and regulation of the carAB
operon in Salmonella typhimurium.";

Eur. J. Biochem. 176:421-429(1988).

-! CATALITIC ACTIVITY: 2 ATP + L-glutamine + CO(2) + H(2)O = 2 ADP +
Dhosphate + L-glutamate + carbamoyl phosphate.

-! COFACTOR: Binds 3 manganese ions per subunit (By similarity).

-! CATALITIC ACTIVITY: CATABLASIS.

-! PATHWAY: Pyrimidine biosynthesis.

-! ATHWAY: Pyrimidine biosynthesis.

-! SUBUNIT: Composed of two chains; the small (or glutamine) chain
promotes the hydrolysis of glutamine to ammonia, which is used by
the large (or ammonia) chain to synthesize carbamoyl phosphate.
                                                                                                                                                                                                                                                                                                                               STRAIN=LTZ / SGSC1412 / ATCC 700720;

-!- FUNCTION: DESMIN ARE CLASS-III INTERMEDIATE FILAMENTS FOUND IN MUSCLE CELLS.

NUSCLE CELLS. IN ADULT STRIATED MUSCLE THEY FORM A FIEROUS NETWORK CONNECTING WYOFIBRILS TO EACH OTHER AND TO THE PLASMA MEMBRANE FROM THE PERIPHERY OF THE Z-LINE STRUCTURES.

-!- SUBJUIL: Homopolymer.

-!- SUBJUILS LOCATION: Cytoplasmic.

-!- SUMILARITY: BELONGS TO THE INTERNEDIATE FILAMENT FAMILY.

A new immunogenic polypeptide has been developed comprising an immunogenic part of a soluble Mycobacterium tuberculosis antigen (its variant differing only in conservative substitutions and/or modifications). The present sequence represents and Nuberculosis antigen, TD38-1. The immunogenic polypeptide can be used to diagnose M.tuberculosis infection by forming complexes with specific antibodies in the sample. Fragments of DNA encoding the immunogenic polypeptide can be used as diagnostic primers or probes and agents that bind to the antigen, especially monoclonal antibodies or equivalent polyclonal antibodies, are also used for diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAW81747;

                                                                                                                                  A new immunogenic polypeptide has been developed comprising an immunogenic part of a soluble Mycobacterium tuberculosis antigen (its variant differing only in conservative substitutions and/or modifications). The present sequence represents a M.tuberculosis antigen, Tb38-1. The immunogenic protein, and fusion proteins containing one or more of the proteins or one of the proteins plus BSAT-6, are useful in vaccines, preferably when formulated with a M.tuberculosis (for treatment or prevention).
                                                                                                                                                                                                                                                                                                                                                        Gaps
                                            New immunogenic polypeptide(s) from Mycobacterium tuberculosis - are useful in vaccines for prevention or treatment of tuberculosis, also for diagnosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              yen; immunogen; vaccine; tuberculosis; non specific adjuvant;
testing; M.tuberculosis.

ww immunogenic polypeptide(s) from soluble M. tuberculosis antigens useful for diagnosis of M. tuberculosis infection

Example 3; Page 136; 190pp; English

```
This sequence represents an immunogenic portion of a soluble Mycobacterium tuberculosis (MT) antigen which can be used in a method for inducing protective immunity against tuberculosis (TB). This sequence can be formulated into vaccines and/or pharmaceutical compositions for immunising against M. tuberculosis infection or may be used for the
